MAKEOVER FOR WWW.OPENFLYERS.COM

Over the time **openflyers** has become an ERP (Enterprise Resource Planning) software dedicated to aeronautical structures.
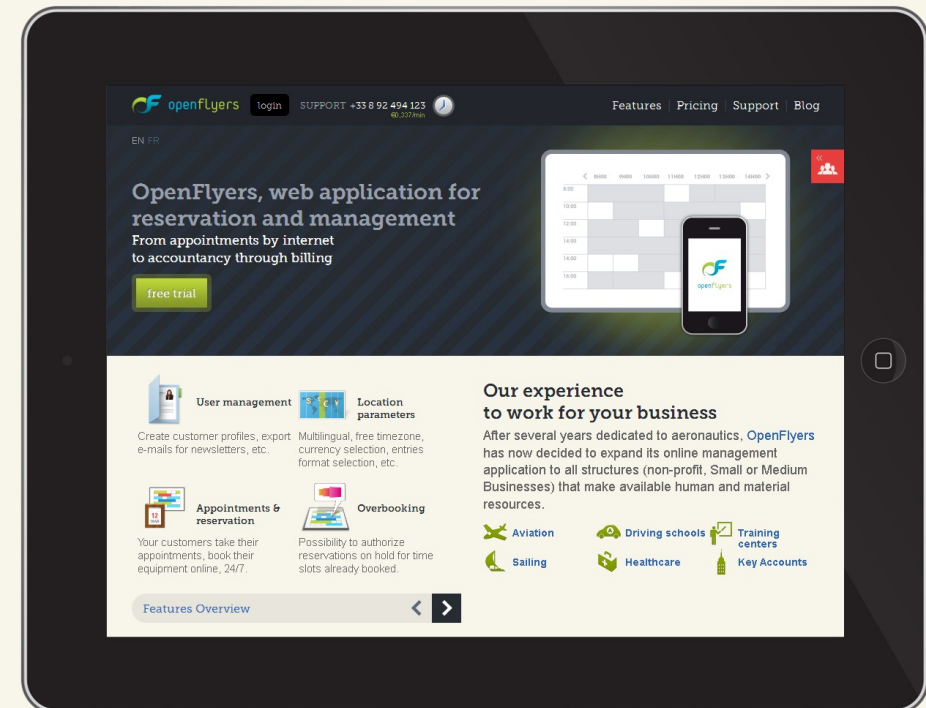

At the same time, many **openflyers** users have asked us to adapt our application to other activities without professional innovative ERP solution.

So we have decided to explore new markets whose needs are similar to those of aeronautical structures.

The goal is simple: to increase our revenues in order to increase our investment in the development of new features. Thus, the development costs of the **openflyers** application will no longer be supported only by the aviation industry but by all the activities which are clients of **openflyers**. This will speed up the creation of new features.

To promote this expansion, **openflyers** website underwent a facelift. More readable, more airy, more complete, find the information that have made the success of **openflyers**.

Feel free to consider using **openflyers** outside the aviation industry or to speak about it around you.

RECRUITMENT

openflyers recruits an IT Engineer.

Wishing to constantly offer innovative services, **openflyers** is looking for new talent to expand its development team, with the sole aim to respond more quickly to your needs.

For more information, see our **Recruitment** page.

OpenFlyers recruits an IT Engineer.

OpenFlyers, innovative start-up, at the cutting edge of technological IT innovations, is an IT consulting specialised in an ERP on the web for service companies, on niche markets, especially aeronautical ones.

OpenFlyers solution exists for 8 years now and its software is used by more than 250 companies. Thus, more than 1,000 resources (mainly aircraft) and 30,000 users are managed daily by the OpenFlyers internet solution. More than 2,000,000 page views are generated each month.

To support its growth, especially to develop the functionnalities of its software and to expand to other sectors the scope of application of its sofware, the OpenFlyers company is looking for a 3rd year student from an engineering school to accomplish his last year project, with a long-term contract.

OBJECTIVE

To maintain and develop management tools related to OpenFlyers internal servers and to participate to the development of the various parts of the OpenFlyers application (web interface, geolocalization, touchpad interface, VoIP).

MODIFICATION OF THE SUBSCRIPTION NAMES

With the opening to new markets, **openflyers** reformulates its price list to better bring out the offers for each type of structure.

As a consequence:

- the Shared Ownership package becomes the **Solo** package;

- the Airline package becomes the **Business** package.

Find the different subscription packages at our **Pricing** page.

SMARTPHONE INTERFACE

openflyers will soon publish an adaptation of the drop-down navigation menu accessible on touch screens.

You will then be able to log in with your SmartPhone and access **openflyers** from anywhere at any time.
